

Butchery

STOPS THE BLADE
IN LESS THAN
0.015 SECONDS!

THE BANDSAW AID THAT MINIMISES THE RISK OF SERIOUS OPERATOR INJURY. STOPS BLADES WITHIN MILLISECONDS!

Interfood Butchery Ltd is proud to have been chosen as the sole distributor in the UK and Ireland for the BladeStop™ range of bandsaws. Already proven in Australasia, this innovative technology is new to these two countries. With thousands of conventional commercial bandsaws in daily operation in the meat processing industry around the world, evidence suggests their use can potentially result in serious incidents for the operators using them.

- Greatly reduces the potential for serious injury
- Safeguards workers and improves morale
- Dramatically reduces potential for compensation payouts and lowers insurance premiums
- Available with two different sensing modes
- Upon detecting contact with the operator wearing a sensor band under protective clothing, the moving blade stops in a fraction of a second
- Second sensing system detects operator gloves moving too quickly (as in a stumble or flicking motion) in front of the moving blade
- In all cases, the cutting blade comes to a complete stop in no more than 0.015 secs
